## DETAILED ACTION

### *Election/Restriction*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8 and 41, drawn to a magnetic core, classified in class 428, subclass 216.
  - II. Claims 9-16, drawn to a current sensor, classified in class 324, subclass 117.
  - III. Claims 17-23, drawn to a current transformer, classified in class 336, subclass 182.
  - IV. Claims 24-30, drawn to a circuit breaker, classified in class 335, subclass 18.
  - V. Claims 31-35, drawn to a method of assembling a magnetic core, classified in class 29, subclass 602.1.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions V and I-IV are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the core can be formed by prearranging the laminae.

Inventions I-III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a core not used for

Art Unit: 2832

the sensor of II, the transformer of III, the circuit breaker of IV, inventions II has separate utility such as a sensor not using the core of I, for the transformer of III or the circuit breaker of IV, invention III has separate utility such as a current transformer not using the core of I, the sensor of II or in the circuit breaker of IV and inventions VI has separate utility such as a circuit breaker not using the core of I, the sensor of II or the transformer of III. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
